

Sanket Sharma

Full Stack Engineer

+91 70212 47474 | sanket@signaloninternet.com | linkedin.com/in/signaloninternet | github.com/signaloninternet | Delhi, India

Full stack engineer who ships complete products alone: **11 products since 2023, 4 still live**, generating revenue and serving real users across healthcare ([among.health](#)), commerce ([stash.market](#)), education ([gomawo.tech](#)), and operations (a valet platform doing **\$1K MRR**). 2+ years of US contract work across payments, multi-tenant SaaS, and LLM agent pipelines. Owns everything from database schema to production deploy.

EXPERIENCE

Software Engineer

Feb 2026 to Present

Shiritai

Remote

- Building an RLM document generator that takes structured client inputs, recursively scores and selects the right clauses, and outputs finished long-form bilingual documents ready for review.
- Every generated document carries a verifiable change history from input to delivery, with rendering pipelines and HMAC-signed share links so external reviewers open finals without holding edit access.

Software Engineer, Web Platforms

Nov 2025 to Feb 2026

Mediamaxxing LLC

Remote, US

- Built an AI quality and spam scoring engine for TikTok, YouTube, and Instagram using Gemini API with engagement signals, metadata analysis, and sentiment scoring, processing **thousands of assets per day**.
- First version of the AI video tooling lost editor trust to silent quality failures; rebuilt it around an eval harness scoring outputs against editor-approved edits. Manual processing time fell **60 percent (20 hours per editor per week)**.
- Reduced API latency with Redis caching and AWS optimization (S3, Lambda, CloudFront) while closing **1,400+ production issues** and merging **300+ pull requests**.

Software Engineer, Full Stack

Mar 2025 to Nov 2025

OceanWaveWeb LLC

Remote, US

- Built **OceanWave Brain** as the only engineer end to end: a **4 role** multi-tenant agency OS in Next.js with database-enforced tenant isolation (Postgres RLS), Stripe Connect onboarding with webhook driven payouts, a parallel Platform Payments API, and a public Edge API for headless content.
- Shipped **12+ production Next.js and TypeScript sites** scoring **95 to 100 on Google PageSpeed**, plus a React Native ordering system live across **11+ restaurant branches**, owning architecture, CI/CD, and production monitoring throughout.

Junior Developer (Intern) and Freelance Full Stack Engineer

Dec 2023 to Mar 2025

CyberFlux Enterprises and mchdev.studio

Remote / Delhi, India

- At CyberFlux, built a reusable React component library for an apparel platform featured on Shark Tank India, cutting page load times **30 percent**. At mchdev.studio, delivered **4 client projects** end to end and closed **INR 2.5L+ in contracts** solo.

PROJECTS

Valet Parking Operations Platform | React Native, Next.js, Supabase, Deno, Stripe, Twilio

Live · \$1K MRR

- Runs valet operations at a restaurant every shift and generates **\$1,000 MRR**: check-in, dynamic pricing, shift management, and automated checkout across a React Native staff app, Next.js admin console, and tokenized customer portal.
- Put the ticket state machine and split-payment validation in PostgreSQL triggers, so the database refuses invalid transitions and cash and card ledgers reconcile under shift-time pressure. Checkout links go out over SMS, WhatsApp, and email from Deno edge functions with audit logging on every payment intent.

among.health | Next.js, TypeScript, Supabase, Deepgram, OpenRouter, Polar

[among.health](#)

- Launched a clinician-reviewed mental health continuity platform: an ambient AI scribe streams consultation audio to Deepgram in real time and drafts structured clinical notes via OpenRouter with **9 doctor-facing and 7 patient-facing fields** across 5 risk levels.
- Chose clinician-in-the-loop over autopilot because trust is the product: AI drafts stay invisible to patients until a doctor approves through an authorized RPC, with Row Level Security across **20+ tables** enforcing access by role, clinic, and ownership.

stash.market | Next.js, Node.js, Supabase, Redis, AWS, Celery

[stash.market](#)

- Multi-tenant storefront builder; one live business runs **INR 20L+ inventory** through it with **sub-2 second page loads**. Tenant isolation lives in the database rather than app code, so a leaked key still cannot read another tenant's data.

gomawo.tech | Next.js, TypeScript, Supabase, Python, Gemini API

[gomawo.tech](#)

- Live subscription SaaS (**₹499/month**) for placement prep: a learner model tracks how students solve, not just what, using time, confidence, and struggle signals to rewrite the problem queue every **5 solved problems** across a **3,893-problem catalog**.

EDUCATION

B.Tech in Computer Science (AI and ML) — Sanskriti University · CGPA 9.0

Aug 2023 to May 2027

TECHNICAL SKILLS

Languages and Frontend: TypeScript, JavaScript (ES6+), Python, SQL, React, Next.js, React Native, Expo, Redux, Tailwind CSS

Backend and Data: Node.js, Express, FastAPI, Deno Edge Functions, REST APIs, Webhooks, WebSockets, PostgreSQL, RLS, Supabase, Redis, MongoDB

Cloud and DevOps: AWS (S3, Lambda, CloudFront, EC2), Docker, GitHub Actions, CI/CD, Linux, Git

AI and Integrations: LLM agents, prompt engineering, eval pipelines, Gemini, OpenRouter, Deepgram, Stripe Connect, Twilio, SendGrid
